PROFESSIONAL SUMMARY

Generative AI Engineer with production experience across custom diffusion model training, creative AI pipelines, culturally-aware AI systems, and AI automation. Specialized in SD/FLUX-based models, dataset curation, model quality evaluation through visual testing and training logs, and user-facing workflows for art, product, research, and internal business teams. Combines AI research, Python/JavaScript automation, agentic workflows, creative technology, and a commercial production background in mobile games.

SELECTED AI IMPACT

- Trained and deployed custom SD/FLUX-based diffusion models for production art teams, reducing art production time by up to 70%.
- Built culturally-aware generative workflows for SWANA representation, focused on visual accuracy, bias reduction, and non-generic cultural output.
- Created n8n automation workflows, including multi-agent systems, Slack-integrated assistants, and department-specific ChatGPT/Gemini bots.
- Set up AI working environments for AI and Art Production teams, covering model deployment, workflow configuration, documentation, and user support.

PROFESSIONAL EXPERIENCE

Art AI Researcher / Generative AI Engineer

May 2024 - Present

Glera Games / Vizor Apps - Projects: Road Trip, Pines Peak

- Train custom SD/FLUX-based diffusion models for Art departments to accelerate production workflows across commercial mobile game projects.
- Curate and structure training datasets; define data strategies for visual consistency, style accuracy, cultural or product relevance, and production usability.
- Run model training using OneTrainer, Ostris AI Toolkit, Kohya_SS, PyTorch/TensorFlow-based workflows, and related diffusion infrastructure.
- Evaluate model outputs, training logs, loss graphs, overfitting behavior, prompt responsiveness, style adherence, and usability for artists.
- Build internal workflows in ComfyUI, Automatic1111, and Forge WebUI, supported by documentation and onboarding materials.
- Set up AI and Art Production team environments: model deployment, workflow configuration, access setup, and user support.
- Develop n8n automation workflows, including multi-agent systems and Slack-integrated assistants such as an SQL-assistant bot for Analytics.
- Create custom ChatGPT and Gemini assistants for department-specific research, documentation, analysis, and operational workflows.

CORE EXPERTISE

GENERATIVE AI / MODEL TRAINING

Stable Diffusion, FLUX-based models, LoRA training, embeddings, ControlNet, dataset curation, visual QA, loss graph analysis, model testing, training retrospectives

AI ENGINEERING / AUTOMATION

Python, JavaScript, OpenAI API, Gemini API, ChatGPT, Claude, custom GPT/Gemini assistants, n8n, agents, Slack bots, Docker, RunPod, Modal, Hugging Face

CREATIVE AI TOOLING

ComfyUI, Automatic1111, Forge WebUI, OneTrainer, Ostris AI Toolkit, Kohya_SS, Midjourney, Flora/Founa, Adobe Photoshop, technical documentation

PRODUCTION / REAL-TIME

Unity, C#, INK, shaders, Spine, particles, Cinemachine, asset optimization, Git, Jira, Asana, Notion, Miro, Confluence, cross-functional delivery

LANGUAGES

Ukrainian - fluent/native

Russian - fluent/native

English - B2

Portuguese - basic

German - basic

PROFESSIONAL EXPERIENCE

Generative AI Consultant / Cultural AI Researcher 2024 - Present

ARK Knowledge Networks | Qareeb | American University of Beirut | Private Consulting

- Work on SWANA-region-oriented cultural AI projects focused on improving local representation and reducing bias in generated content.
- Contribute to localized model development, including visual systems designed to reproduce regional aesthetics, environments, objects, and narratives more accurately.
- Support dataset preparation, model evaluation, workflow design, culturally-specific output testing, and human-in-the-loop review.

Technical Artist / Creative AI and Unity Tools Developer June 2023 - February 2024

Kwalee Ltd., Lisbon - Unity interactive story project with INK integration

- Worked as the main Technical Artist, bridging art, writing, design, production, and engineering.
- Participated in Stable Diffusion model training and AI integration planning, establishing the foundation for later Generative AI specialization.
- Built chapter implementation workflows in Unity: INK setup, story logic debugging, UI screens, FTUE flows, pop-ups, camera animation, particles, and Spine integration.
- Developed C# and Python production tools, including a Chapter Thumbnail Creator and PNG-level Character Exporter.
- Created custom INK commands with programmers and writers; redesigned storyboard and cross-department workflows to improve collaboration and delivery speed.
- Used playtest metrics to identify content issues and plan updates; wrote technical documentation for tools, workflows, and implementation standards.

Technical Artist / Pipeline and Automation Specialist February 2021 - June 2023

Playrix / VOKI Games, Kyiv - Free-to-play mobile games

- Contributed to two top free-to-play mobile projects, including one title with 43.8M+ downloads.
- Worked across art and animation optimization, asset integration, technical implementation, Python automation, debugging, and technical documentation.
- Built Python scripts to automate repetitive production tasks and improve technical art workflows.
- Optimized graphic assets, animation pipelines, texture packs, and technical art workflows for mobile performance.
- Improved technical proficiency of the Tech Art department by 30% within 4 months through mentoring, internal training, and educational materials.
- Led technical animation initiatives, supervised graphic asset optimization, and led implementation of a new feature as Lead Technical Artist.

Freelance Head of Art / Indie Game Developer January 2020 - April 2022

Freelance - indie game projects

- Led end-to-end visual production for indie game projects across tower defense/RTS, platformer, and runner genres, combining art direction, asset creation, Unity implementation, and production problem-solving.

SELECTED PROJECTS

Custom Diffusion Models for Art Production

Road Trip / Pines Peak - Glera Games / Vizor Apps. Built and deployed SD/FLUX-based custom models for production art teams: dataset curation, training, testing, evaluation, documentation, workflow design, environment setup, and artist onboarding. Technologies: Stable Diffusion, FLUX, LoRA, ComfyUI, OneTrainer, Ostris AI Toolkit, Kohya_SS, RunPod, Docker.

SWANA Cultural AI Models

ARK Knowledge Networks / Qareeb / American University of Beirut. Contributed to culturally-aware generative AI initiatives focused on accurate SWANA-region representation, bias reduction, localized model behavior, visual QA, and human-in-the-loop review.

Internal AI Automation Assistants

Designed AI automation workflows and assistants for internal teams, including an n8n-based Slack SQL assistant for Analytics and custom ChatGPT/Gemini assistants for research, documentation, analysis, and operations.

EDUCATION

Bachelor of Fine Arts

Southern Ukrainian National Pedagogical University, Odesa | September 2018 - June 2022

COURSES

Automation with Python - Google / Coursera
Creating a 2D Platformer with Unity - Udemy
Motion Design, Illustration, Brand Identity - SKVOT

FOCUS

Custom diffusion models
Cultural AI systems
Creative AI pipelines
AI workflow automation
Technical documentation
Cross-functional delivery
