PROFILE

I research, design and deliver applied AI solutions from the first use-case hypothesis to development, integration, testing, documentation and long-term support. My strongest zone is turning fast AI experiments into useful internal products: custom AI workflows, production pipelines, assistants, automations, and prototypes that teams can actually use.

Currently working as an AI Art Researcher / Generative AI Specialist, with a broader practice across AI operations, creative AI systems, cultural AI, internal tooling, and AI-assisted product development. I use Codex, Claude Code and agentic development workflows to rapidly generate, prototype, test and refine new ideas before turning the strongest ones into working systems.

AI OPERATIONS IMPACT

Full-cycle delivery	Research, use-case framing, prototype design, integration, evaluation, documentation, training and post-launch support.
Internal AI tooling	n8n workflows, Slack-integrated assistants, department-specific ChatGPT/Gemini bots, repeatable AI workflows.
Production AI systems	Custom SD/FLUX-based models and pipelines for Art Production teams, reducing art production time by up to 70%.
Rapid prototyping	Codex / Claude Code as part of the build loop: generate ideas, create testable versions, debug, compare approaches, iterate.

CORE EXPERTISE

AI workflow automation LLM applications n8n + agents Python / JavaScript LoRA / DreamBooth RunPod / Modal / Docker	Internal AI tools Conversational + Voice AI Slack bots Codex / Claude Code ComfyUI / Forge / A1111 Technical documentation	Rapid prototyping Custom GPT / Gemini assistants OpenAI API / Gemini API Stable Diffusion / FLUX Dataset curation + visual QA Team onboarding + support

PROFESSIONAL EXPERIENCE

AI Art Researcher / Generative AI Specialist

Glera Games / Vizor Apps · May 2024 - Present · Projects: Road Trip, Pines Peak

- Own full-cycle AI R&D for production teams: technology research, use-case exploration, dataset strategy, model development, evaluation, rollout, documentation and support.
- Train and deploy custom SD/FLUX-based diffusion models and production workflows for commercial mobile game projects.
- Build internal AI workflows in ComfyUI, Automatic1111, Forge WebUI and related environments, with onboarding materials for artists and production teams.
- Develop AI automation workflows in n8n, including multi-agent systems and Slack-integrated assistants such as an SQL assistant for Analytics.
- Create custom ChatGPT and Gemini assistants for research, documentation, analysis and operational workflows across departments.
- Use Codex, Claude Code, Python, JavaScript and API-based workflows to prototype, debug and test internal AI tool ideas quickly.
- Evaluate model quality through visual testing, loss graphs, overfitting behavior, prompt responsiveness, style adherence and production usability.

Generative AI Consultant / Cultural AI Researcher

ARK Knowledge Networks · Qareeb · American University of Beirut · Private Consulting · 2024 - Present · SWANA-region cultural AI and localized model development

- Support culturally-aware AI initiatives focused on local representation, contextual accuracy and bias reduction in generated outputs.
- Contribute through dataset preparation, model evaluation, workflow design, culturally-specific output testing and human-in-the-loop review.

SELECTED WORK

Internal AI Automation Assistants

Slack-integrated and department-specific AI tools

Designed practical AI assistants and automation workflows for internal teams, including an n8n-based Slack SQL assistant for Analytics and custom ChatGPT/Gemini assistants for research, documentation, analysis and operations. The focus is not only on model capability, but on reliability, team adoption and clear ownership.

Tools: n8n, Slack, OpenAI API, Gemini API, JavaScript, agents, workflow automation

Reading Mentor

Applied conversational AI · 2026

An end-to-end multilingual voice product concept that turns TXT or EPUB books into an interactive learning experience: reading progress, mixed-language speech understanding, contextual explanations, personal vocabulary and careful pronunciation feedback.

Tools: Gemini Live, Voice AI, tool calling, product development, book workflows

Production AI Systems

Enterprise R&D · Glera Games

Full-cycle AI solutions for production teams: technology research, dataset design, model training, evaluation, cloud workflows, integration guidance and ongoing support. Each solution is delivered with documentation, repeatable pipelines and clear ownership for the teams using it.

Tools: Stable Diffusion, FLUX, LoRA, ComfyUI, A1111, Forge, OneTrainer, AI Toolkit, RunPod, Docker

Cultural Heritage AI / SWANA Models

AI expertise for cultural projects

Applied AI expertise for cultural heritage and regional representation initiatives where source quality, context and responsible interpretation matter as much as model capability. The work connects research, structured data, human review and practical delivery.

Tools: Dataset curation, custom diffusion models, visual QA, prompt evaluation, human-in-the-loop validation

ADDITIONAL EXPERIENCE

Technical Artist / Creative AI and Unity Tools Developer

Kwalee Ltd., Lisbon · June 2023 - February 2024 · Unity + INK interactive story product

- Worked as the main Technical Artist bridging art, writing, design, production and engineering across implementation-heavy content systems.
- Built C# and Python production tools, custom INK commands, UI implementation flows, camera animation, particles and Spine integration.
- Improved cross-team workflows, used playtest metrics to plan updates and wrote technical documentation for tools and standards.

Technical Artist / Pipeline and Automation Specialist

Playrix / VOKI Games, Kyiv · February 2021 - June 2023 · Free-to-play mobile games

- Contributed to two large-scale free-to-play mobile projects, including one title with 43.8M+ downloads.
- Worked across art and animation optimization, asset integration, technical implementation, Python automation, debugging and documentation.
- Improved the technical proficiency of the Tech Art department by 30% within 4 months through mentoring, internal training and educational materials.
- Led technical animation initiatives, supervised graphic asset optimization and led implementation of a new feature as Lead Technical Artist.

Freelance Head of Art / Indie Game Developer

Freelance · January 2020 - April 2022

- Led end-to-end visual production for indie game projects across tower defense / RTS, platformer and runner genres, combining art direction, asset creation, Unity implementation and production problem-solving.

OPERATING STYLE

Research quickly	Start from a real team problem, not a fashionable model.
Prototype early	Build small working versions fast, compare approaches, keep the best one.
Document clearly	Turn experiments into repeatable workflows that other people can use.
Support after delivery	Stay close to users, fix friction, improve adoption and maintain systems over time.

EDUCATION, COURSES AND LANGUAGES

Bachelor of Fine Arts, Southern Ukrainian National Pedagogical University, Odesa · 2018 - 2022

Courses: Automation with Python - Google / Coursera; Creating a 2D Platformer with Unity - Udemy; Motion Design, Illustration, Brand Identity - SKVOT

Languages: Ukrainian - native; Russian - native; English - professional; Portuguese - basic; German - basic
