Profile

AI Art Researcher with expertise in generative neural networks, dataset curation, and AI-assisted content creation. Specialized in training and fine-tuning Stable Diffusion (SD 1.5, SD XL, FLUX) models for casual mobile game assets, CG scenes, and illustrations. Proficient in LoRA and DreamBooth training, pipeline optimization, and automation for AI-assisted workflows. Responsible for providing the art department with a fully trained model, along with all necessary documentation, guides, and integration pipelines. Strong analytical skills in visual evaluation, loss tracking, and debugging models to enhance output quality.

Education

Bachelor of Fine Arts Sep 2018 – Jun 2022
Southern Ukrainian National Pedagogical University, Odesa

Employment

Art AI Researcher | Generative AI Specialist May 2024
Glera Games

- Conduct global research on current AI technologies, analyzing their capabilities, trends, and relevance for integration into the company's workflows.
- Evaluate and compare AI solutions to enhance model training, automation, and asset generation processes.
- Curate and annotate datasets for training Stable Diffusion models, using a combination of Python tools and GPT-based automation for efficiency
- Develop LoRA and DreamBooth models according to the requests of the Art Department, optimizing outputs for style consistency and reducing distortions.
- Analyze training results, track loss metrics in TensorBoard, and adjust hyperparameters for better model convergence.
- Develop custom GPT models in ChatGPT, fine-tuning them for specific tasks such as automating text annotation, optimizing dataset processing, and enhancing creative workflows.
- Manage data storage and transfers using rclone, S3-compatible storage, and RunPod.
- Write and maintain technical documentation on model training, dataset creation, AI-assisted asset generation, and the use of custom GPT tools.
- Deliver ready-to-use AI models to the art department, providing all necessary documentation, guides, and integration pipelines to

streamline implementation.

Technical Artist

Jun 2023 - Feb 2024

Kwalee Ltd., Lisbon

- Contributed significantly to an interactive story project built on Unity with INK integration.
- Earned respect as the main Technical Artist of the project.
- Played a key role in important planning initiatives across the Casual Games department.
- Collaborative Artwork: Working closely with the art team to discuss graphic assets, story implementation, VFX, shaders, and brainstorming innovative features.
- Chapter Building in Unity: Was the main person who was responsible for building chapters on all stages of development.
- Unique Visual language implementation: Together with the team finding a solution for the unique visual languages and providing a technical implementation within the engine.
- Metrics Analysing: Based on metrics received during various build playtests planning game updates and improvements.
- UI support: On the stage where the project needed the UI implementation support I was building plenty of screens, pop-ups, FTUEs and other UI elements based on Figma designs.
- Animations implementation: Created and implemented lots of custom camera animations, particle effects for the Mini game and the Main Environment.
- Custom Ink commands: Created together with programmers and writer various custom Inky commands that make the life easier.
- Tool Development: Creating tools on C# (such as Chapter Thumbnail Creator or PNG-level Characters Exporter) and various Python scripts to automate tasks and enhance efficiency for both artists and Technical Artists.
- Workflow Enhancement: Continuously refining cross-department workflows within the team, such as rebuilding storyboard creation processes to optimize efficiency and collaboration.
- Technical Training: Participating in Stable Diffusion model training and AI integration planning.
- Collaboration with Programmers: Collaborating with programmers to discuss tools, features, and strategies for accelerating game development.
- Documentation: Writing comprehensive technical documentation for various tools implementation and to facilitate communication across departments.
- Bug-Fixing: Addressing bugs promptly to maintain the integrity of the project.
- Asset Optimization: Optimizing 2D and 3D assets to enhance performance and gameplay experience.

Technical Artist

Feb 2021 - Jun 2023

Playrix/VOKI Games, Kyiv

- Contributed significantly to the development of two top free-to-play mobile projects, including one title boasting over 43.8 million downloads.
- Excelled in art and animation optimization, asset integration, and scripting, leveraging Python for automation.
- Proficient in debugging and extensive technical documentation writing.

- Demonstrated leadership by enhancing the technical proficiency of the Tech-Art department by 30% within 4 months.
- Developed training programs and mentored new Technical Artists, while also pioneering educational materials for Technical Designers in the Optimization department.
- Spearheaded technical animation initiatives and supervised graphic assets optimization.
- Proficient in reassembling texture packs for ISpy scenes.
- Led a new feature implementation, introducing innovative mechanics as a lead Tech Artist.

Freelance Lead Artist

Jan 2020 – Apr 2022

indie projects

- Was responsible for the whole Graphic part of several small Indie titles (Tower defense/Real-time strategy; Platformer; Runner).
- Provided graphic solutions from the concept stage to finals.
- Led the Art production so as created assets by myself.
- Created tile palettes, custom animations, UI elements, participated in developing on all stages.

Courses

Motion Design	Jan 2021
Illustration	Dec 2020
Brand Identity	Nov 2020
Full course. Creating a 2D platformer with Unity	Mar 2021
Automation with Python	Jan 2022

Hobbies

- playing and creating videogames
- observing and creating different art
- creating tools to automate routine tasks
- playing with SD and other AI
- fishing
- listening to and creating music
- travelling
- martial arts
